

Overview of evaluation plans by Alex Thompson

We have employed a mixed methods approach to document PPIE involvement within AI-Multiply including: an impact log, a qualitative and quantitative survey based on the CUBE Framework, elements of the PiiAF Framework, and PPIE session feedback documents.

We are analysing this data using a ‘follow a thread’ approach to identify and integrate key issues and challenges from across each data source. This data will be supplemented with one-to-one interviews with work package researchers and PPIE members to enhance our understanding of the impact and process of public involvement across the project. The findings will form guidance and publications outlining how best to implement PPIE within similar large AI and big data projects and highlighting any barriers and issues that we have encountered.
